# HiveMQ MQTT Broker

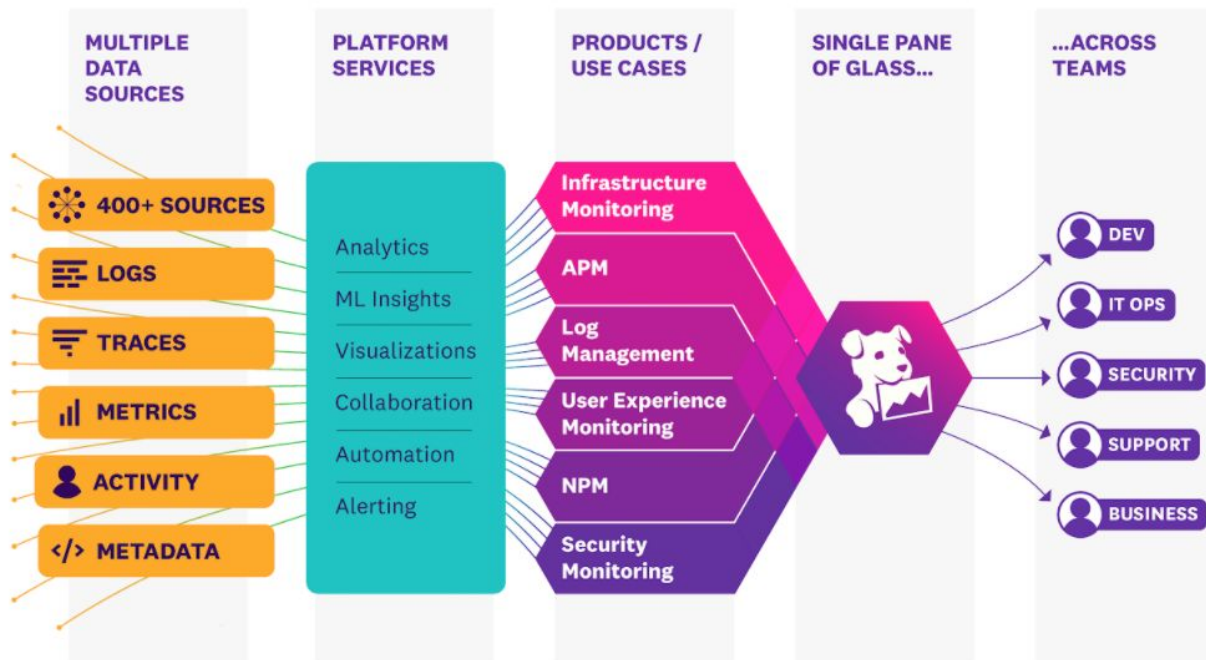

# HIVEMQ

- Connectivity and Messaging Platform
- Based on standard IoT protocol (MQTT)
- Scales to more than 10 million always-on devices
- Allow multi-cloud and Enterprise software integration

# Traditional monitoring tools weren't designed for complex, modern environments

# Datadog: A unified observability platform

# Datadog and HiveMQ integration

# Use Case

- Industrial IoT Use Case
- Connecting the factory floor with the cloud backend
- 2000 sensors connecting, sending data and disconnecting
- 20 shared backend subscribers
  - Receiving half the messages
- HiveMQ as connectivity layer for Kafka
  - Direct integration to Kafka - half the messages for Kafka
- Enterprise Security Extension /w Postgres - Whitelisted Permissions
- Datadog to monitor HiveMQ, Postgres and Kafka

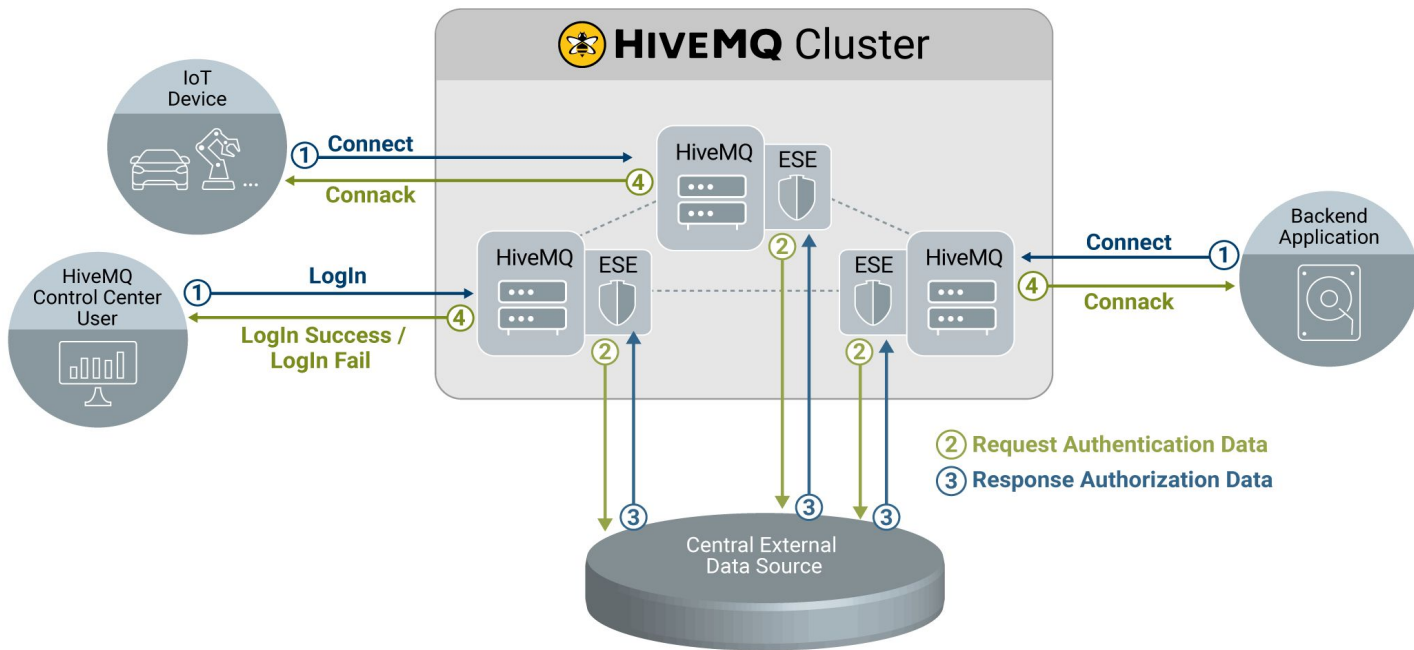

# HiveMQ Enterprise Security Extension

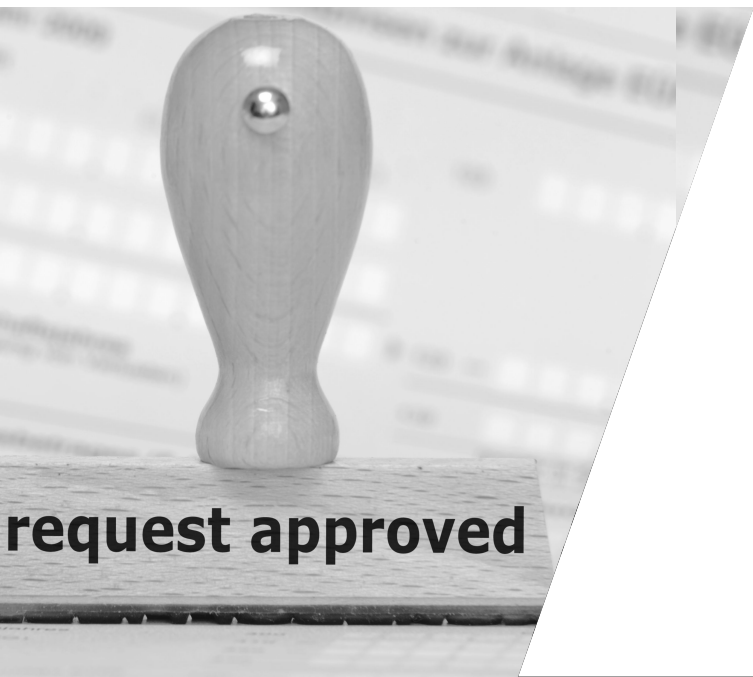

**HIVEMQ**  
Enterprise Security  
Extension

- Central management for IoT device and HiveMQ Control Center authentication and authorization
- Flexible and easy integration with multiple external authentication systems and data sources
- High Scalability and reliability
- Default Whitelisting Concept
- Access log (rolling on daily basis)
- Provides maximum flexibility in defining authorization rules

# HiveMQ Enterprise Security Extension

# Permissions

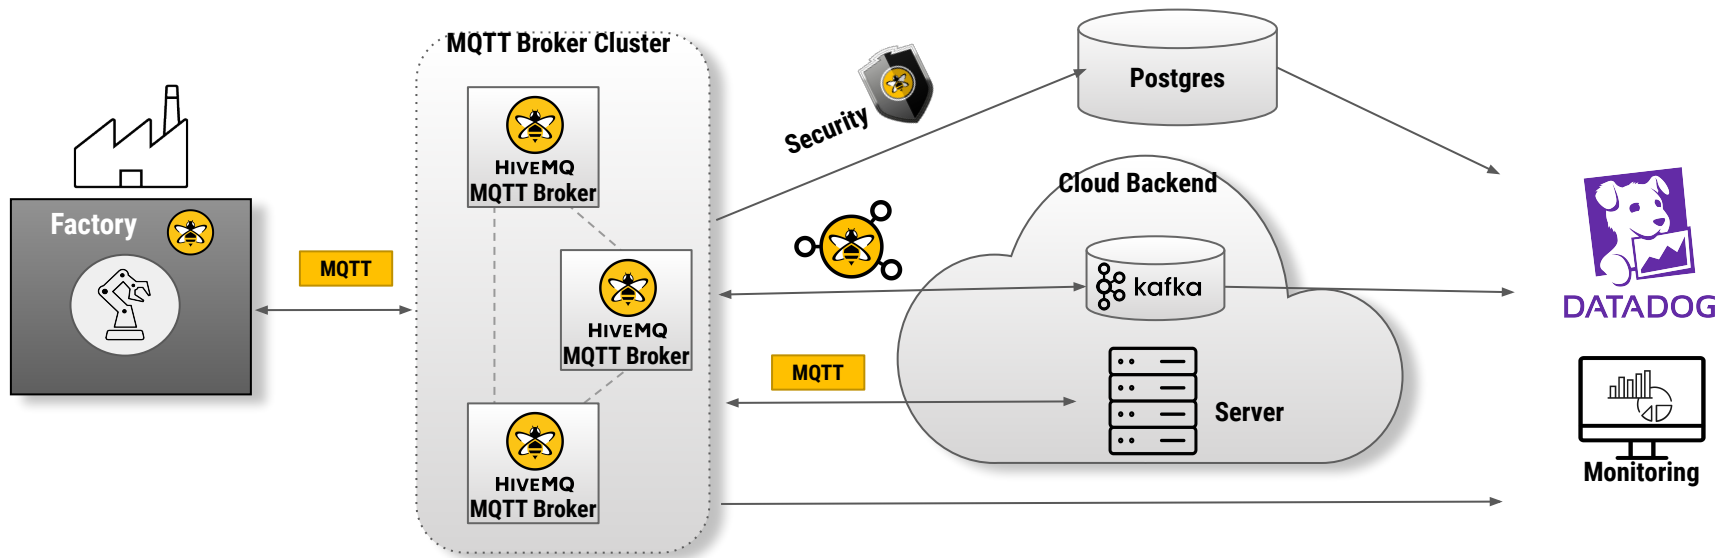

- Sensors = Frontend clients
  - Only allowed to Publish
  - Using topic filter **topic/{client\_id}/+**
- Backend servers
  - Only allowed to Subscribe
  - Topic filter **topic/+/+**

# HiveMQ Enterprise Extension for Kafka

- Native implementation of Kafka protocol
- End to-end persistent messaging guarantees
- Bi-directional communication
- High Scalability and resilience
- Support of Local Schema Registry (Avro, JSON)
- Support of Confluent Schema Registry (Avro)
- Stream to multiple Kafka instances

# Architecture

# Summary

- HiveMQ provides a **scalable and resilient solution** for connecting IoT devices to backend services like Kafka
- HiveMQ **recovers automatically** from the loss of MQTT or Kafka broker nodes
- Datadog's integration provides **unified monitoring** across HiveMQ and other backend services
- Datadog helps you **rapidly detect and troubleshoot issues** so you meet your SLOs
