

WEBINAR

Power-up Digital Transformation in Breweries with MQTT Sparkplug

Hosted By  **HIVEMQ**

In Collaboration With **N3uron**

Speakers

Kudzai Manditereza

Developer Advocate, HiveMQ

kudzai.manditereza@hivemq.com

Goals for Digital Transformation

- Improving Operational Efficiency
- Enhancing Customer Satisfaction
- Boosting Innovation and Agility
- Increasing Competitiveness

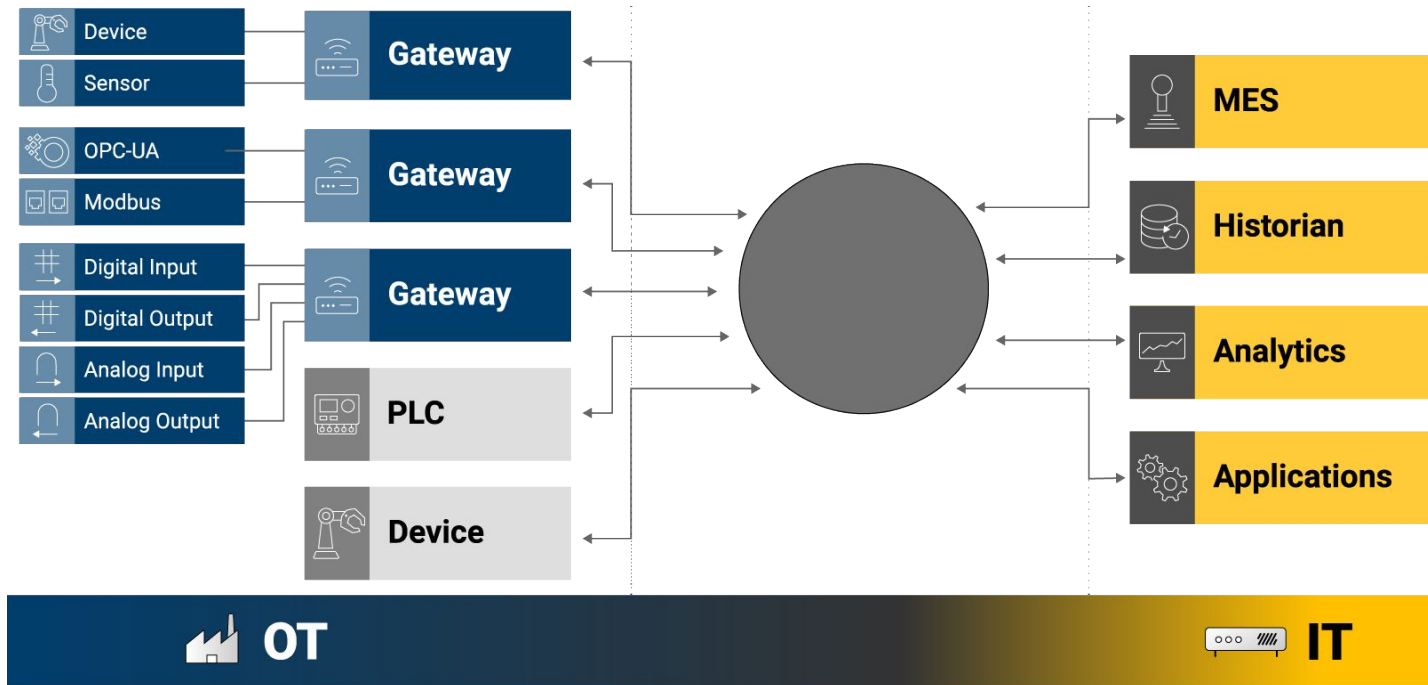

Challenge - Data Integration Complexity

Solution - Decoupled Architecture

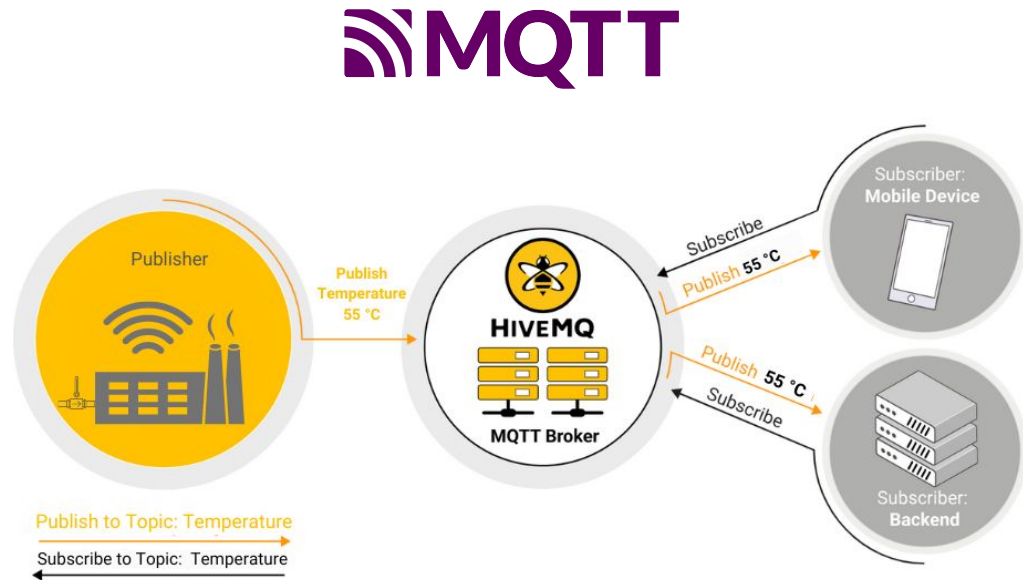

Copyright HiveMQ GmbH 2020

What is MQTT?

- A standard binary publish-subscribe messaging protocol designed for fast and reliable data transport between devices especially under very constrained conditions
- Constraints include unreliable network connectivity, limited bandwidth, limited battery power, and so on
- Built on top of TCP/IP
- Ideal for the Industrial Internet of Things

What does Sparkplug offer for IIoT?

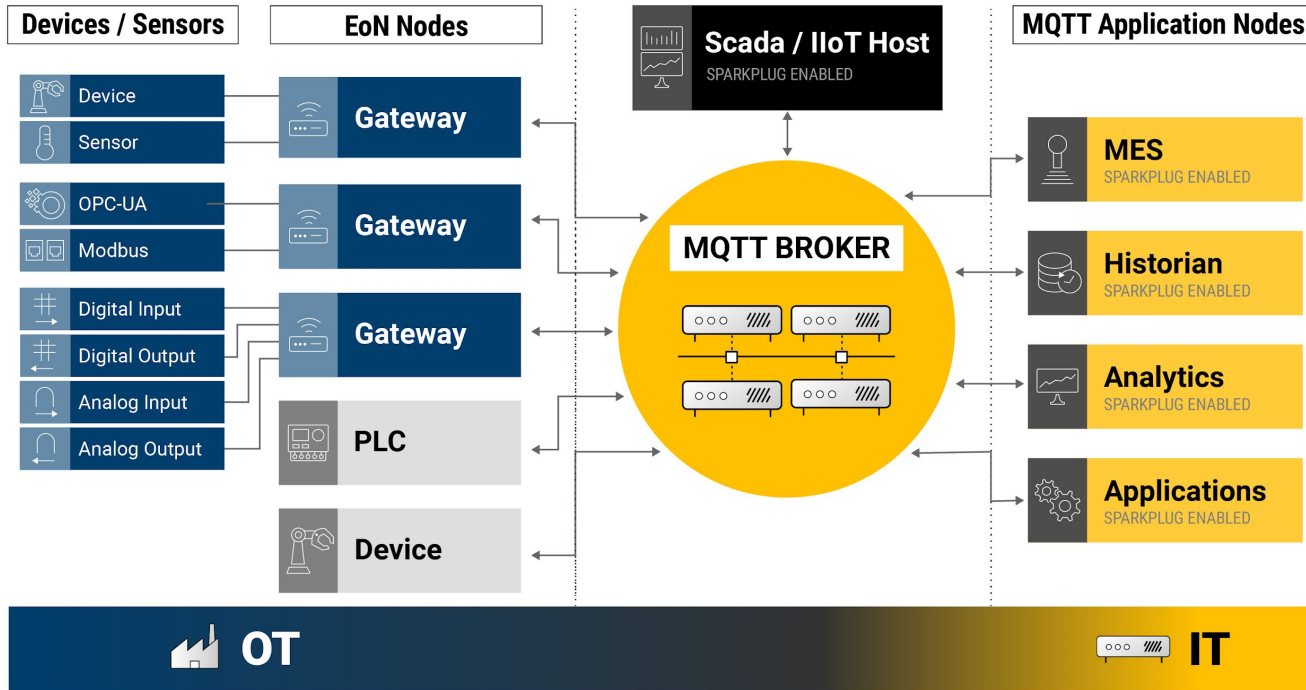

[GitHub - eclipse-sparkplug/sparkplug](https://github.com/eclipse-sparkplug/sparkplug)

Sparkplug defines:

- MQTT Topic Namespace
- MQTT State Management
- MQTT Payload

Main Benefits from Digital Transformation

- Increase efficiency and performance on the shop floor.
- Quality control improvements.
- Guarantee regulatory compliance.
- Reduce energy use.
- Enable product innovations

Challenges

- Huge number and variety of data sources.
- Integrating data from multiple systems across multiple plants.
- Time and cost of integration projects.
- Fear of exposing operational systems to cyber-threats.
- Lack of skilled human resources.

N3uron: Industrial IoT Platform

Unmatched Data Connectivity and Edge Computing Capabilities:

- Modular configurability.
- Cross-platform.
- Unlimited license.
- Web-based.
- Rapid deployment and development.
- Extremely efficient.
- Scalable and versatile architecture.
